

TANKS, *Tuakau, NZ*

AQURON solutions were used extensively on this project by the construction company to ensure effective internal curing of the high performance concrete and to ensure compatibility with the potable water requirements.

AQURON applied solutions provide a unique internal curing protection for new concrete by penetrating deep into the concrete matrix and maximizing moisture availability to the cement to extend hydration. Particularly well suited to low w/c ratio mix designs.

REQUIREMENTS:

- **Internal Curing Protection**
- **Durability Enhancement**
